# Welcome to Xcode

Version 7.2 (7C68)

## Get started with a playground

Explore new ideas quickly and easily.

## Create a new Xcode project

Start building a new iPhone, iPad or Mac application.

## Check out an existing project

Start working on something from an SCM repository.

Show this window when Xcode launches

Open

Choose a template for your new project:

iOS

Application

Framework & Library

Application

Game

### Single View Application

This template provides a starting point for an application that uses a single view. It provides a view controller to manage the view, and a storyboard or nib file that contains the view.

# Add label

# Change label text

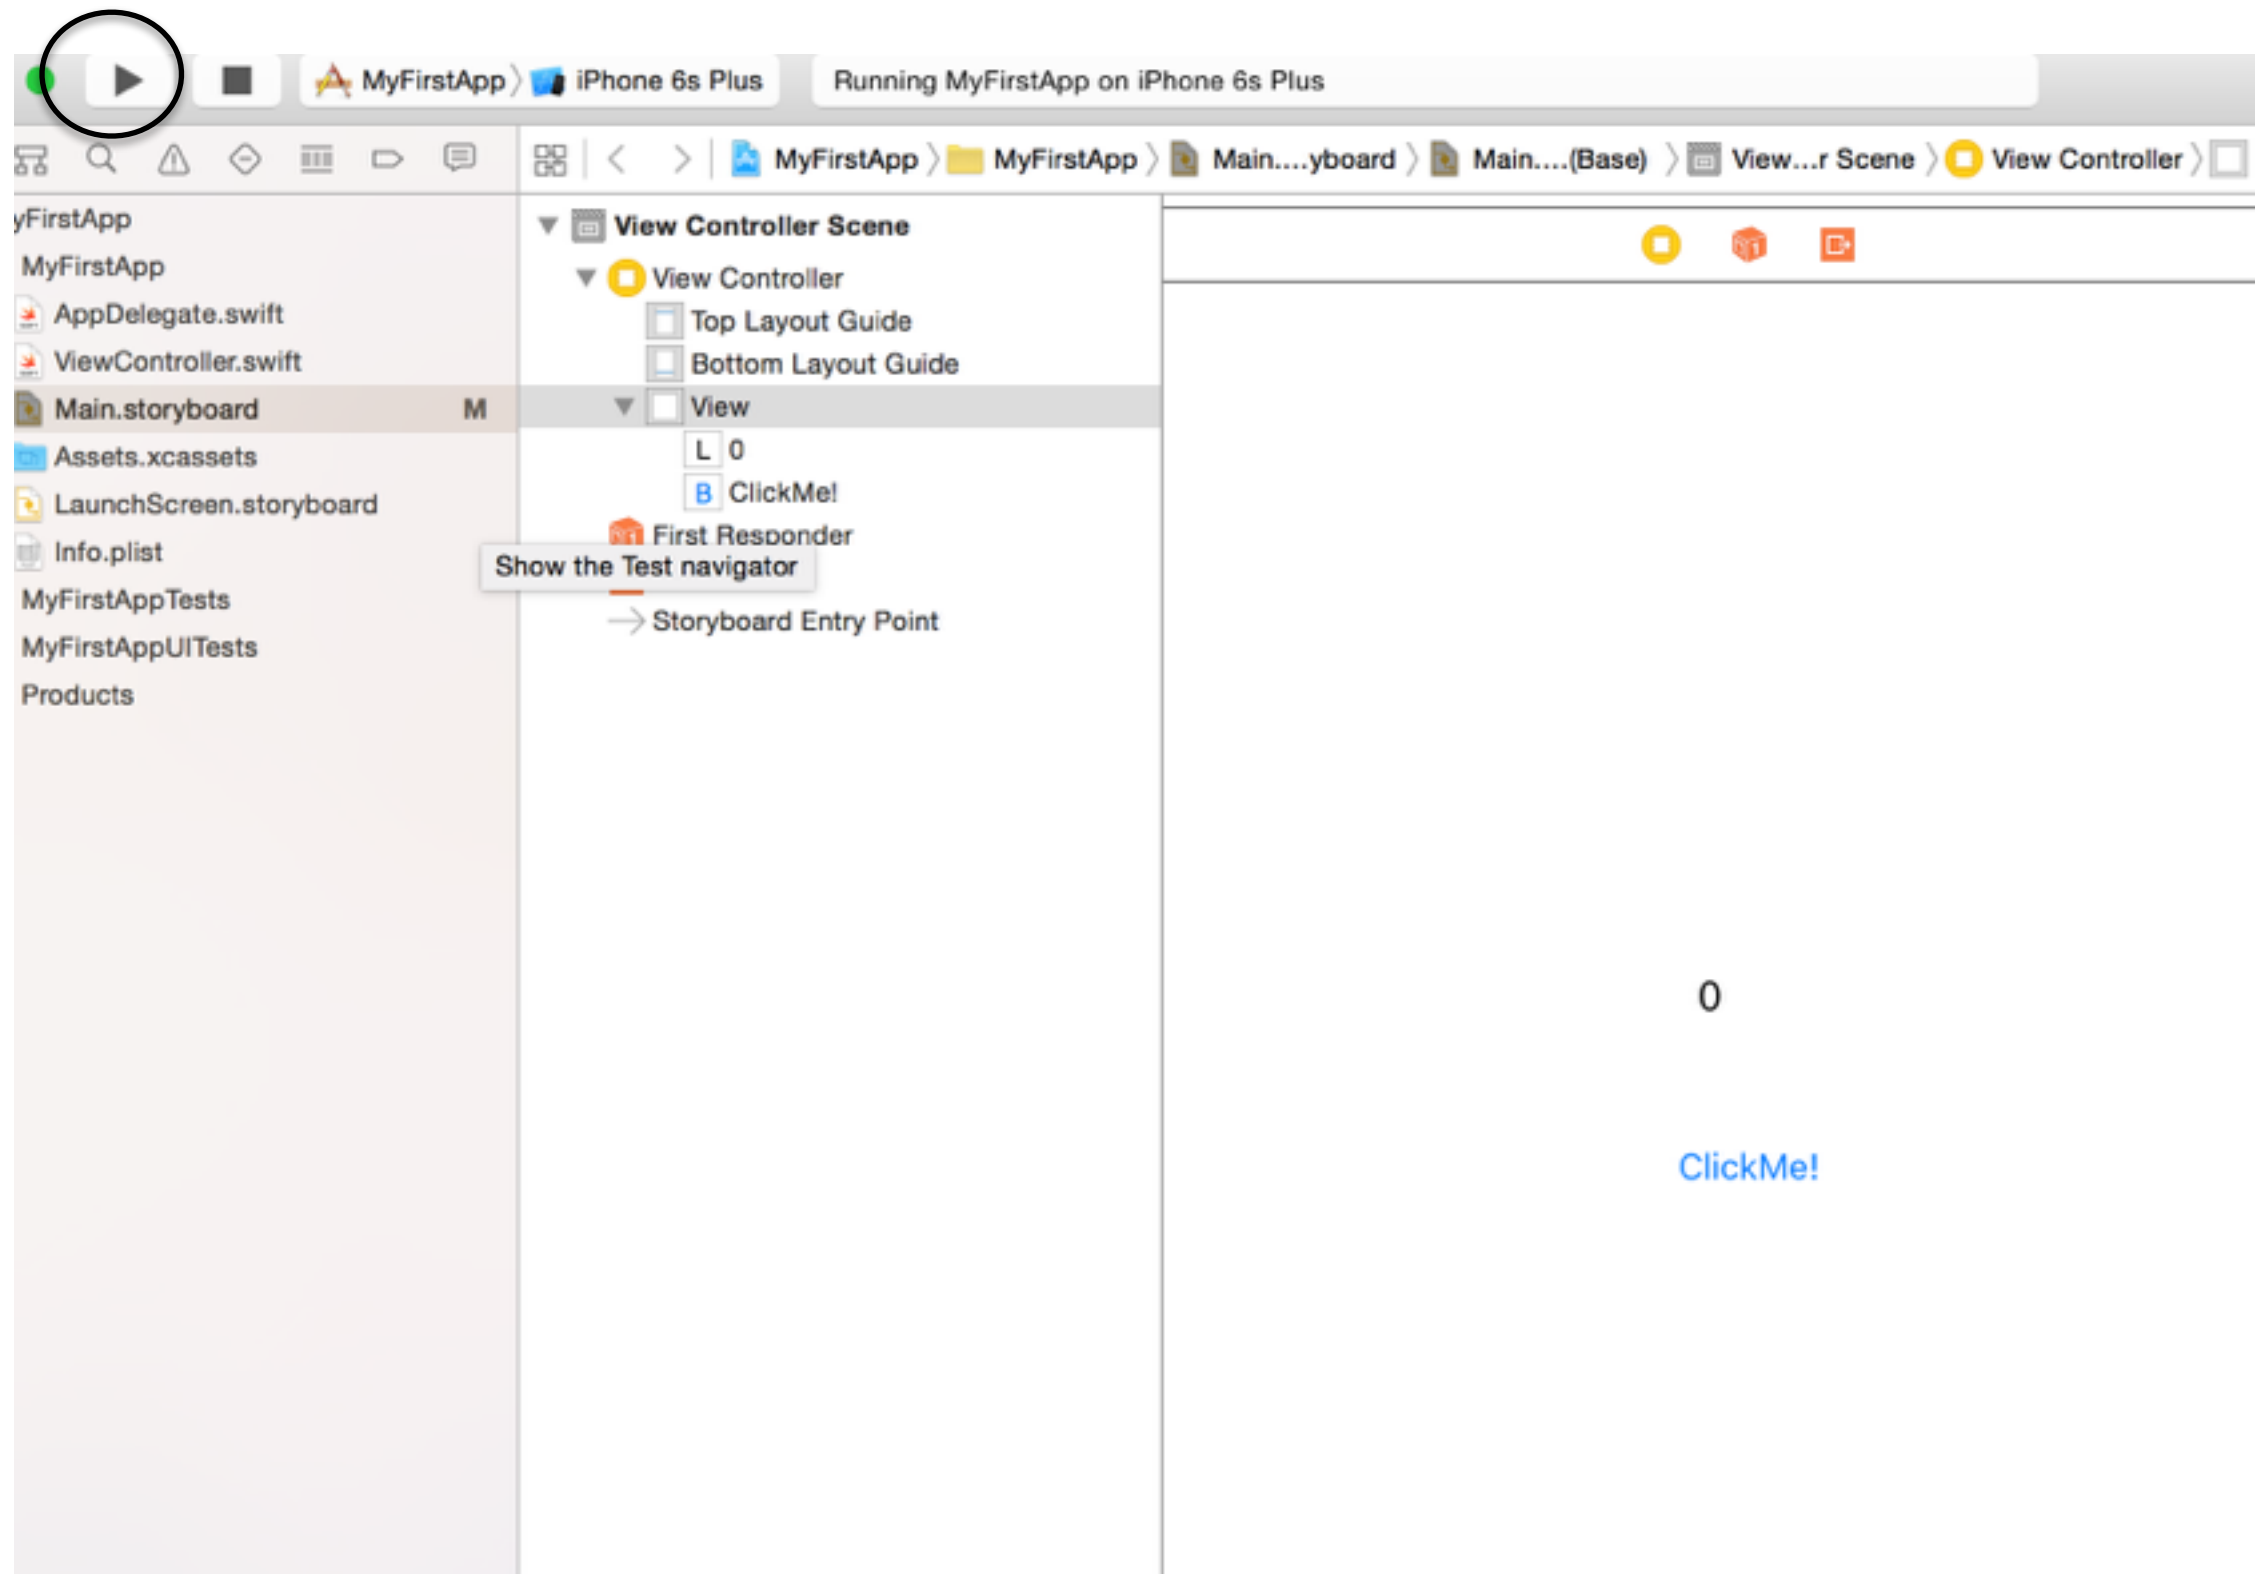

# Add button

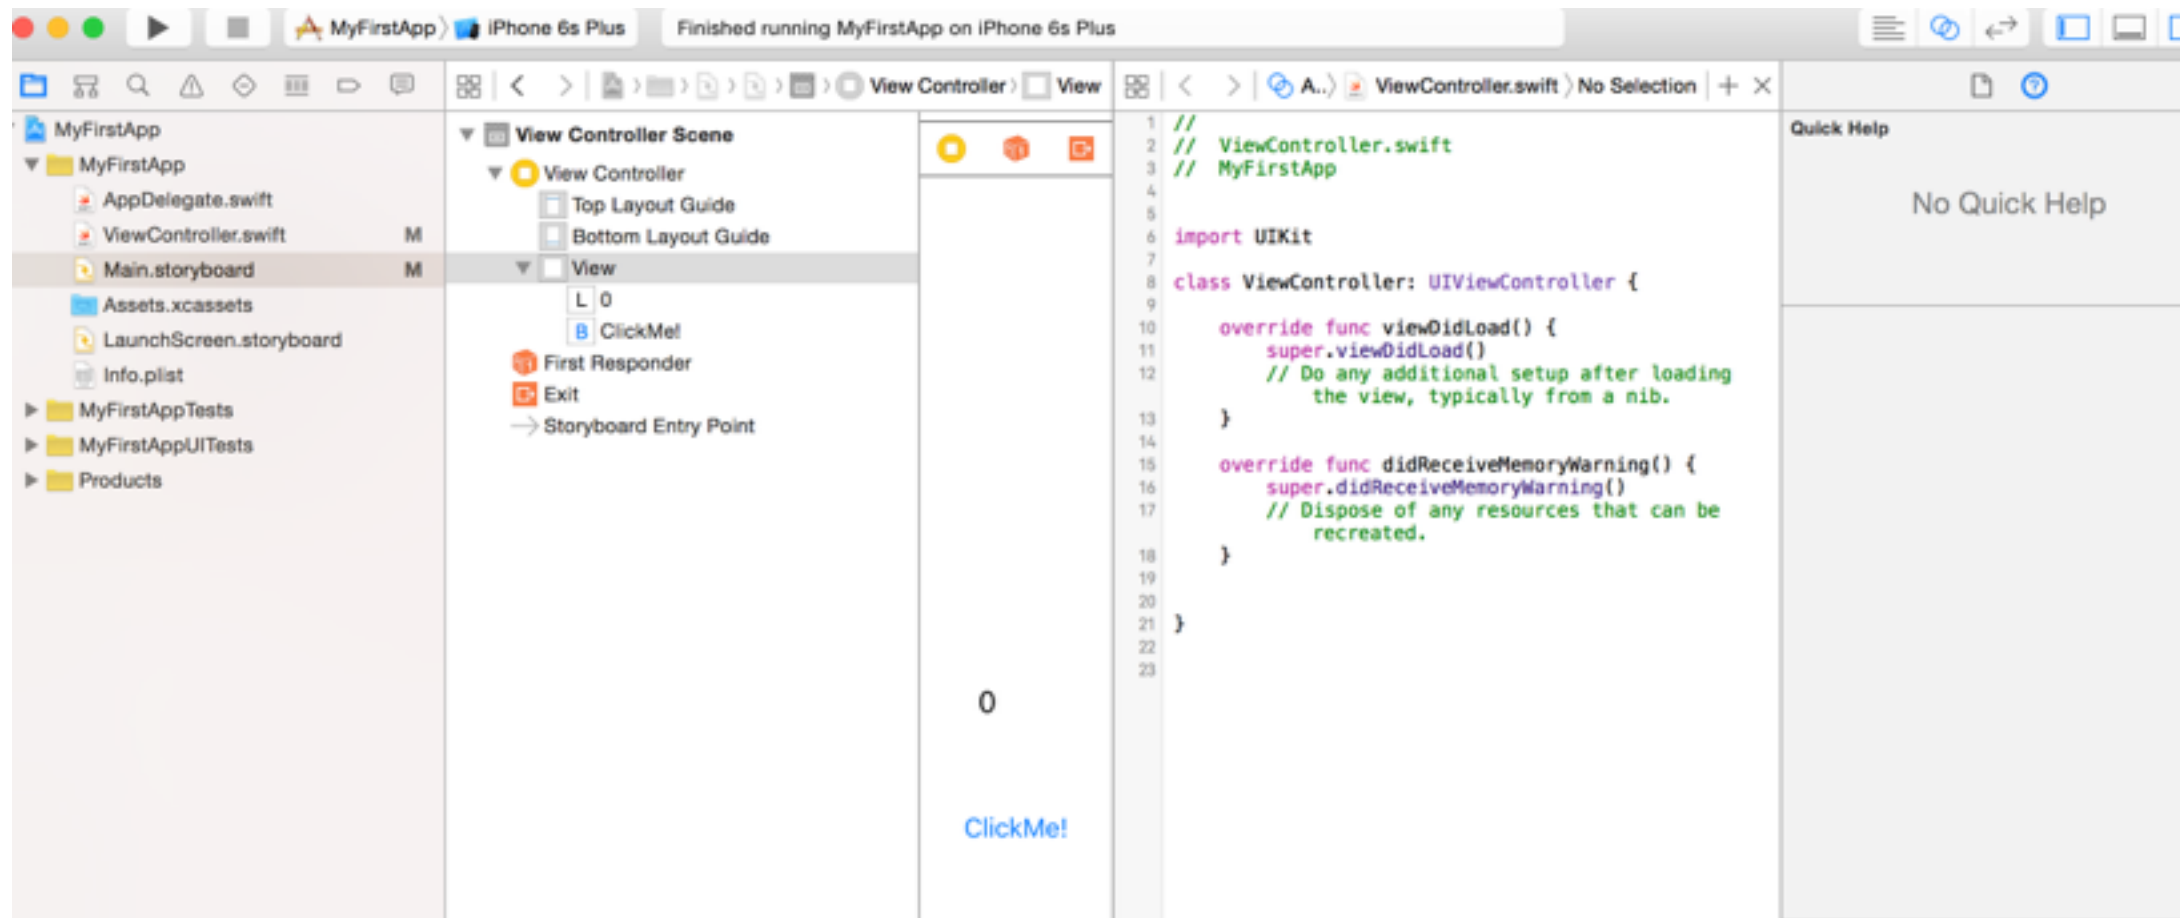

# Build & Run

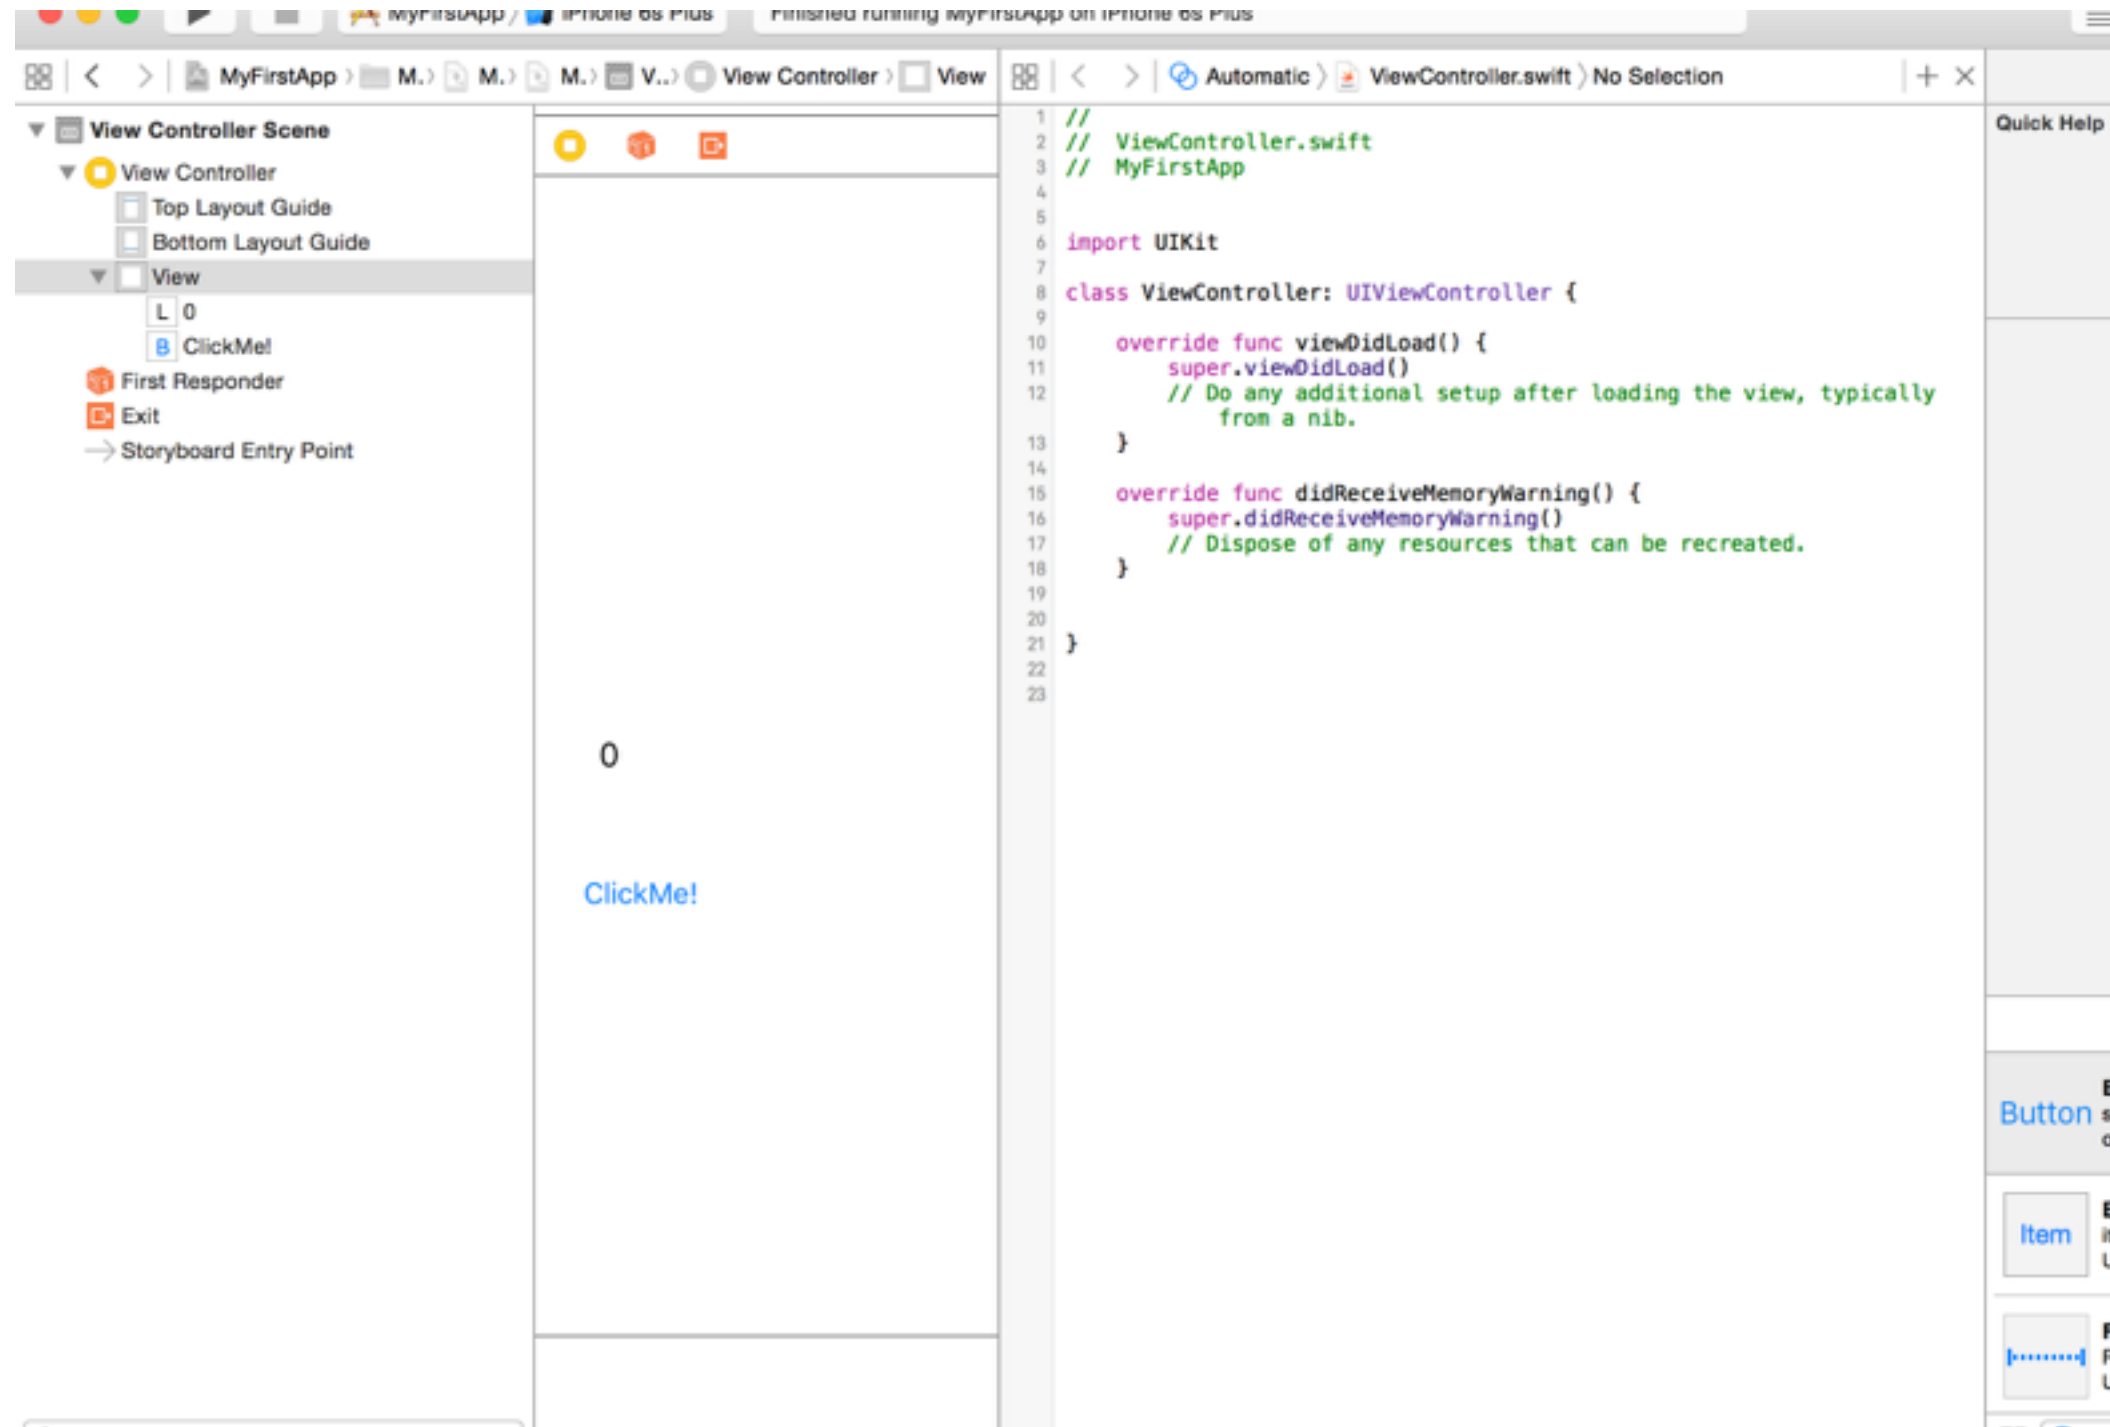

Click to open assistant editor

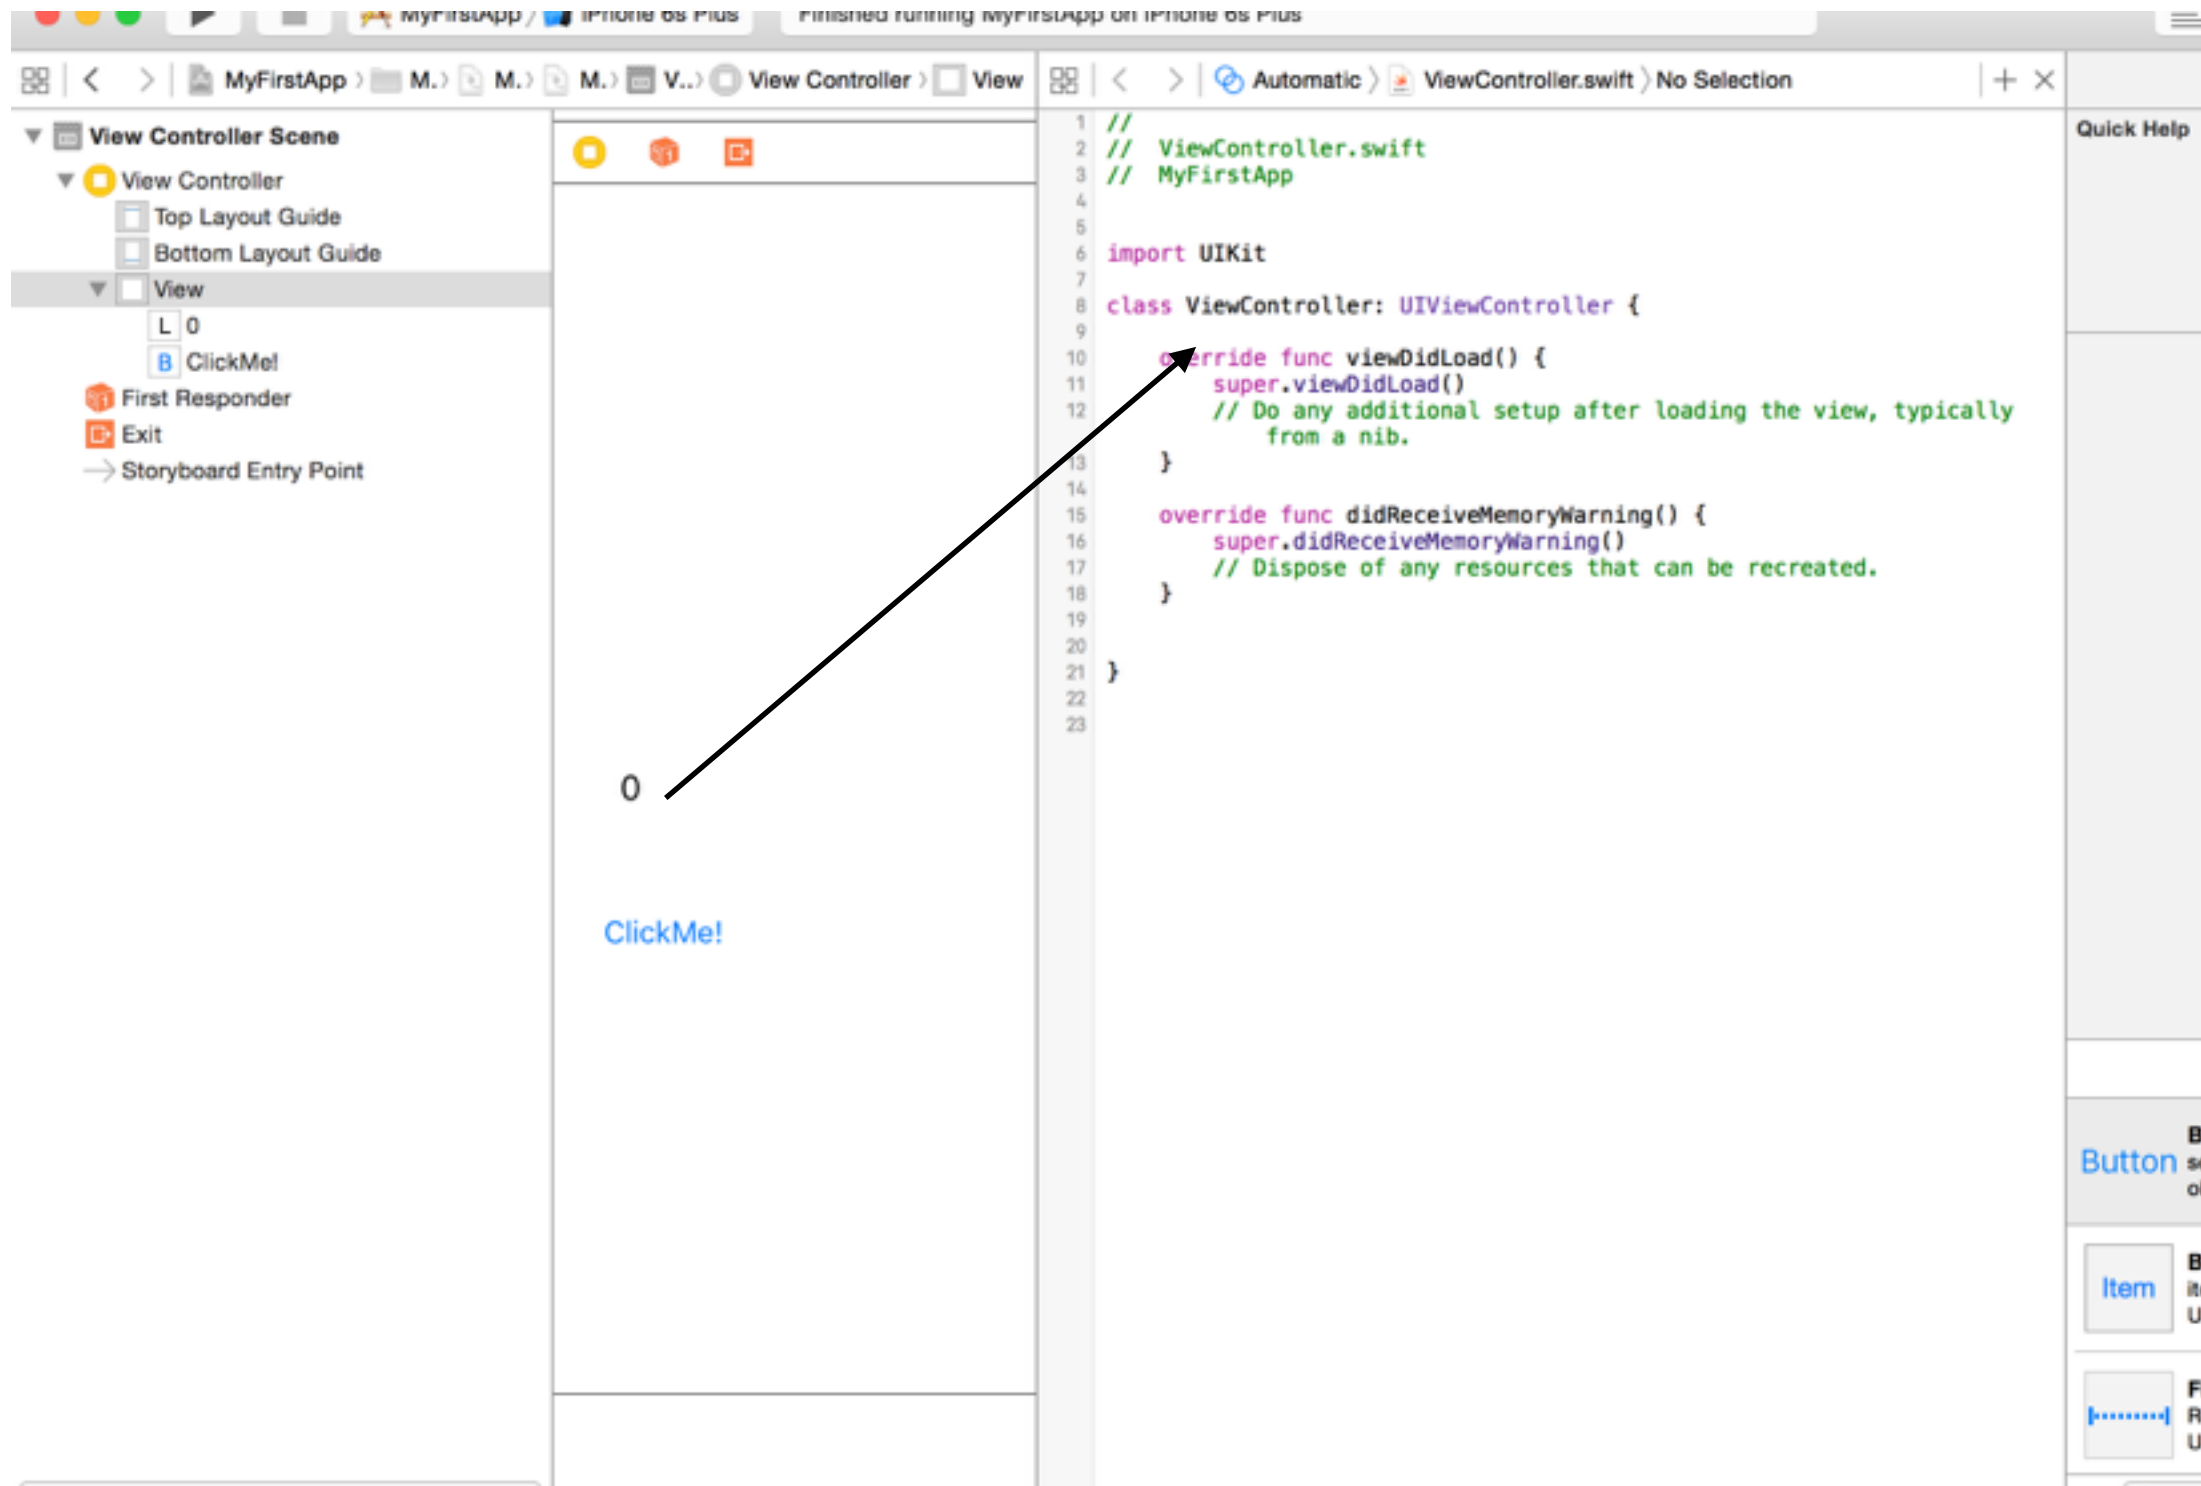

# Opened assistant editor

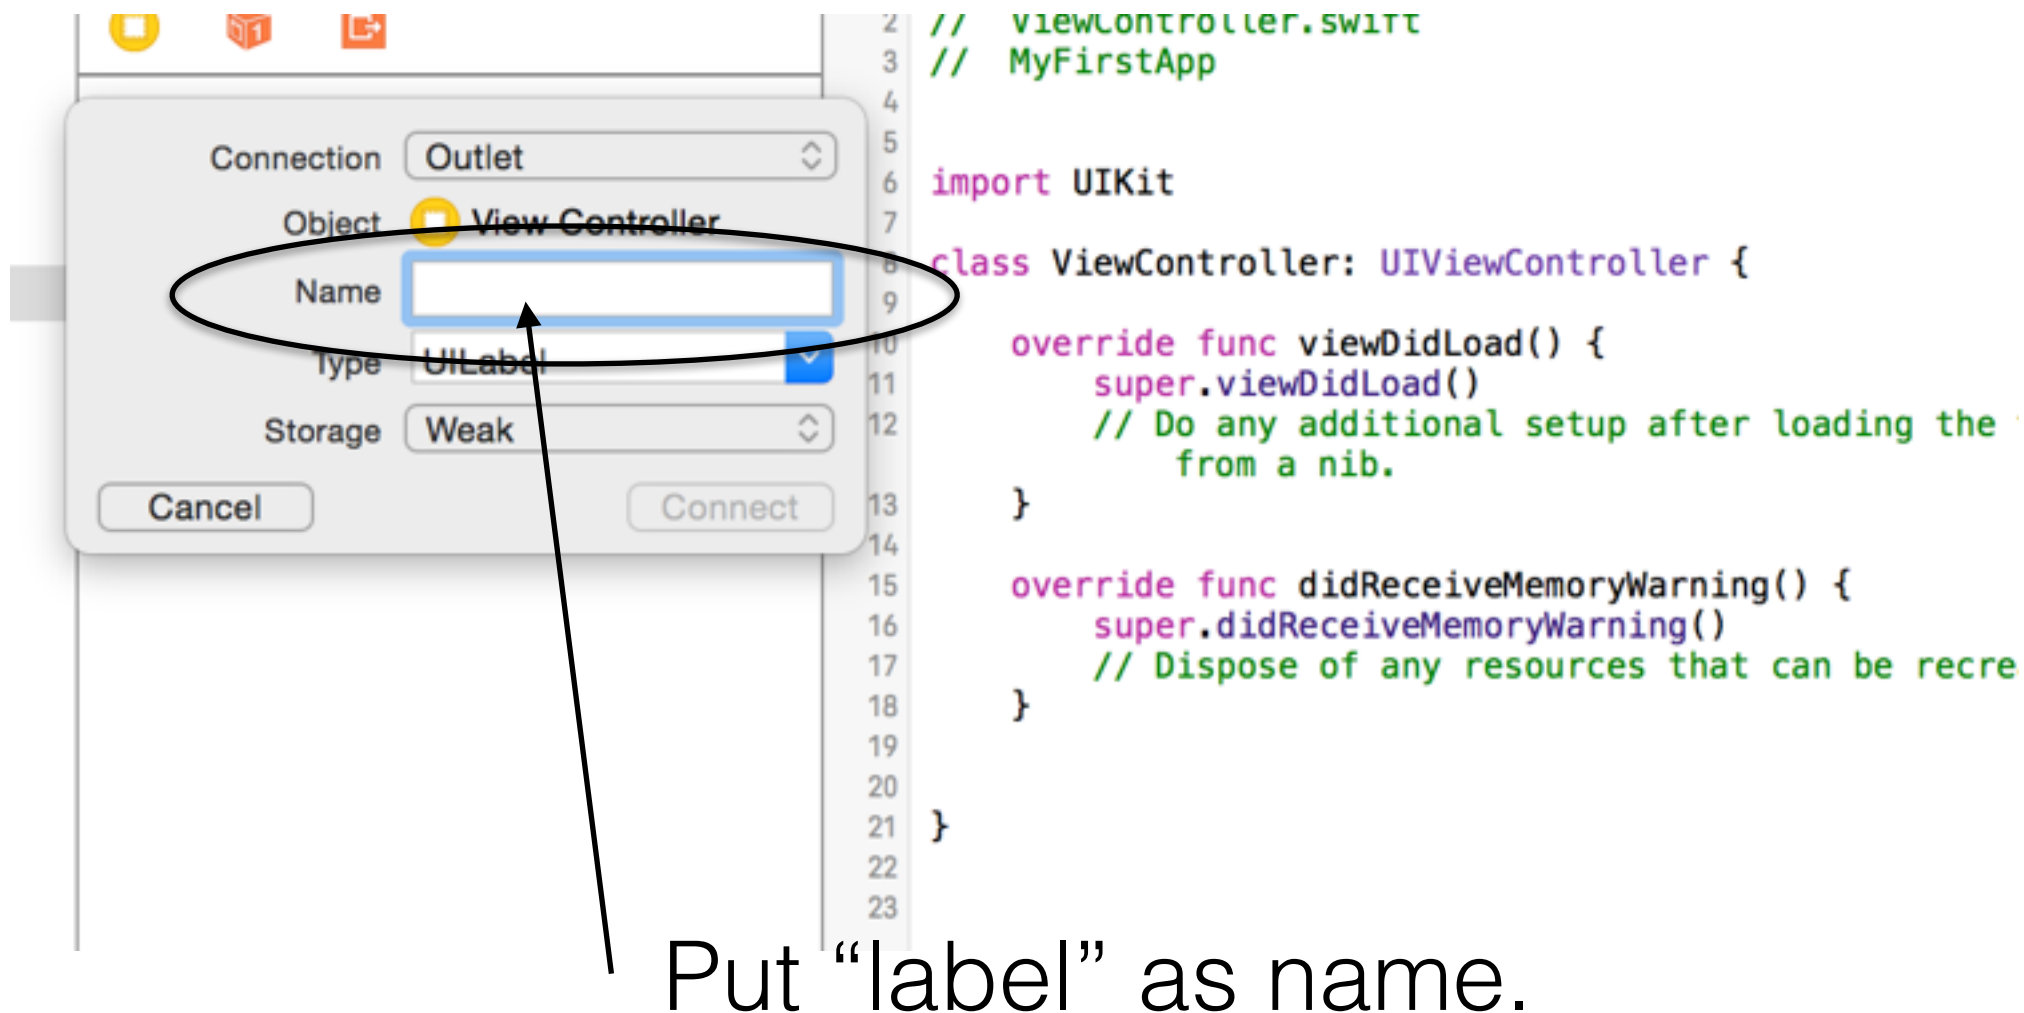

Press Command + 0, to expand/collapse file explorer.

# Connect label and swift code

- 1: Keep pressing “Control” key.
- 2: Try to drag & drop the label to swift code.
- 3: You will see blue arrow coming from the label.
- 4: Put the arrow on swift code.
- 5: You will see a pop up displayed below.

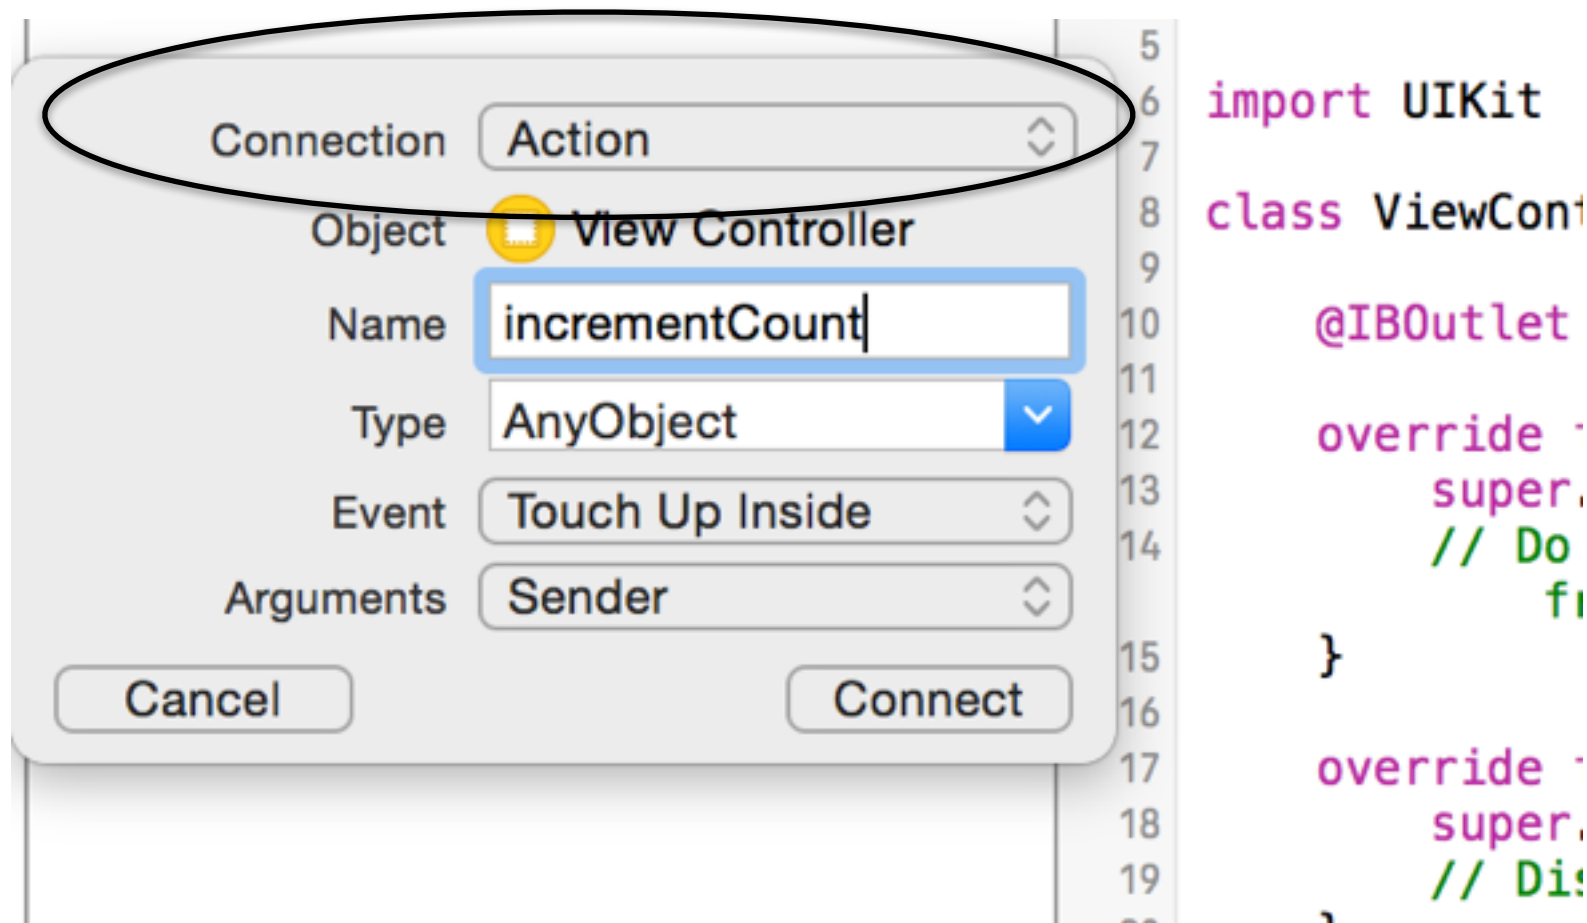

A code line is auto generated.

```
4
5
6 import UIKit
7
8 class ViewController: UIViewController {
9
10     @IBOutlet weak var label: UILabel!
11
12     override func viewDidLoad() {
13         super.viewDidLoad()
14         // Do any additional setup after loading the view, typically
15         // from a nib.
16     }
17
18     override func didReceiveMemoryWarning() {
19         super.didReceiveMemoryWarning()
20         // Dispose of any resources that can be recreated.
21     }
22 }
23
24
25
```

Do the same for button.

\*Select “Action” as Connection.  
Different one is selected by default!

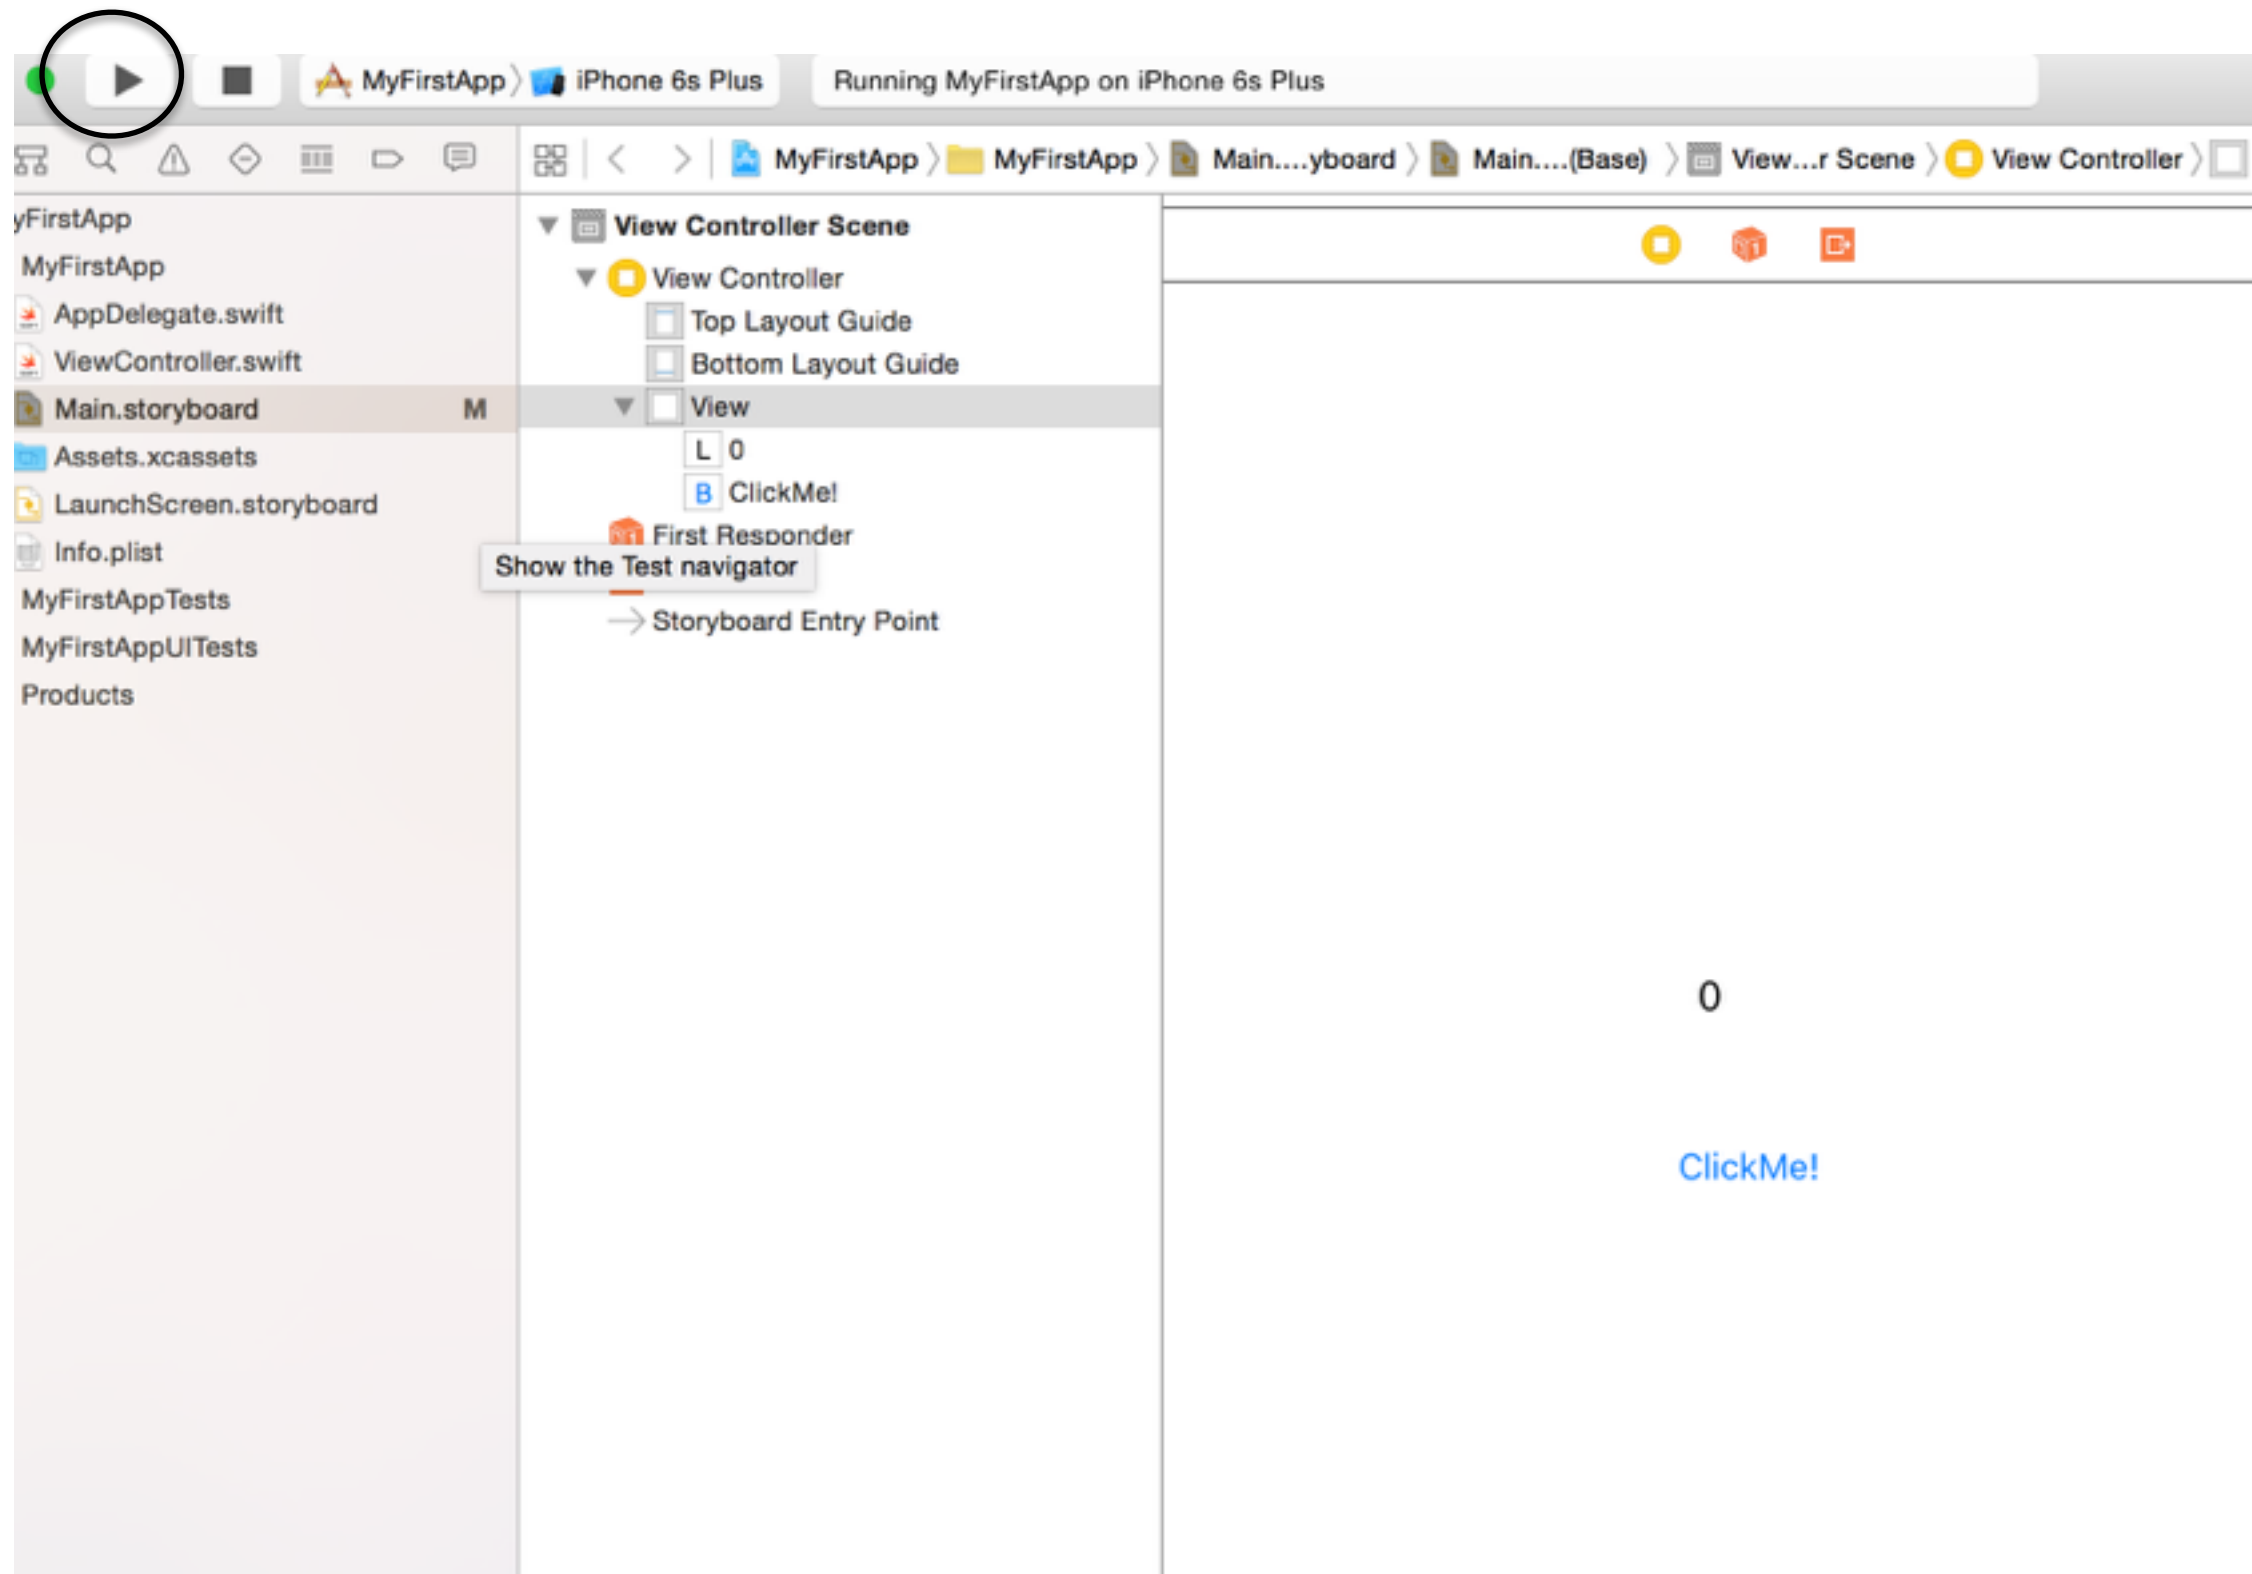

Codes line are auto generated.

```
4
5
6 import UIKit
7
8 class ViewController: UIViewController {
9
10     @IBOutlet weak var label: UILabel!
11
12     @IBAction func incrementCount(sender: AnyObject) {
13     }
14
15     override func viewDidLoad() {
16         super.viewDidLoad()
17         // Do any additional setup after loading the view, typica
18         from a nib.
19     }
20
21     override func didReceiveMemoryWarning() {
22         super.didReceiveMemoryWarning()
23         // Dispose of any resources that can be recreated.
24     }
25 }
26
27
28
```

## Complete code.

```
5 import UIKit
7
3 class ViewController: UIViewController {
9
0     var clickCount = 0
1     @IBOutlet weak var label: UILabel!
2
3     @IBAction func incrementCount(sender: AnyObject) {
4         self.clickCount++
5         self.label.text = "\(self.clickCount)"
6     }
7
8     override func viewDidLoad() {
9         super.viewDidLoad()
10        // Do any additional setup after loading the view, typically
11        // from a nib.
12    }
13
14    override func didReceiveMemoryWarning() {
15        super.didReceiveMemoryWarning()
16        // Dispose of any resources that can be recreated.
17    }
18
19 }
20
21
```

# Build & Run. Again

Click.  
Number increases!

# Run on real device
